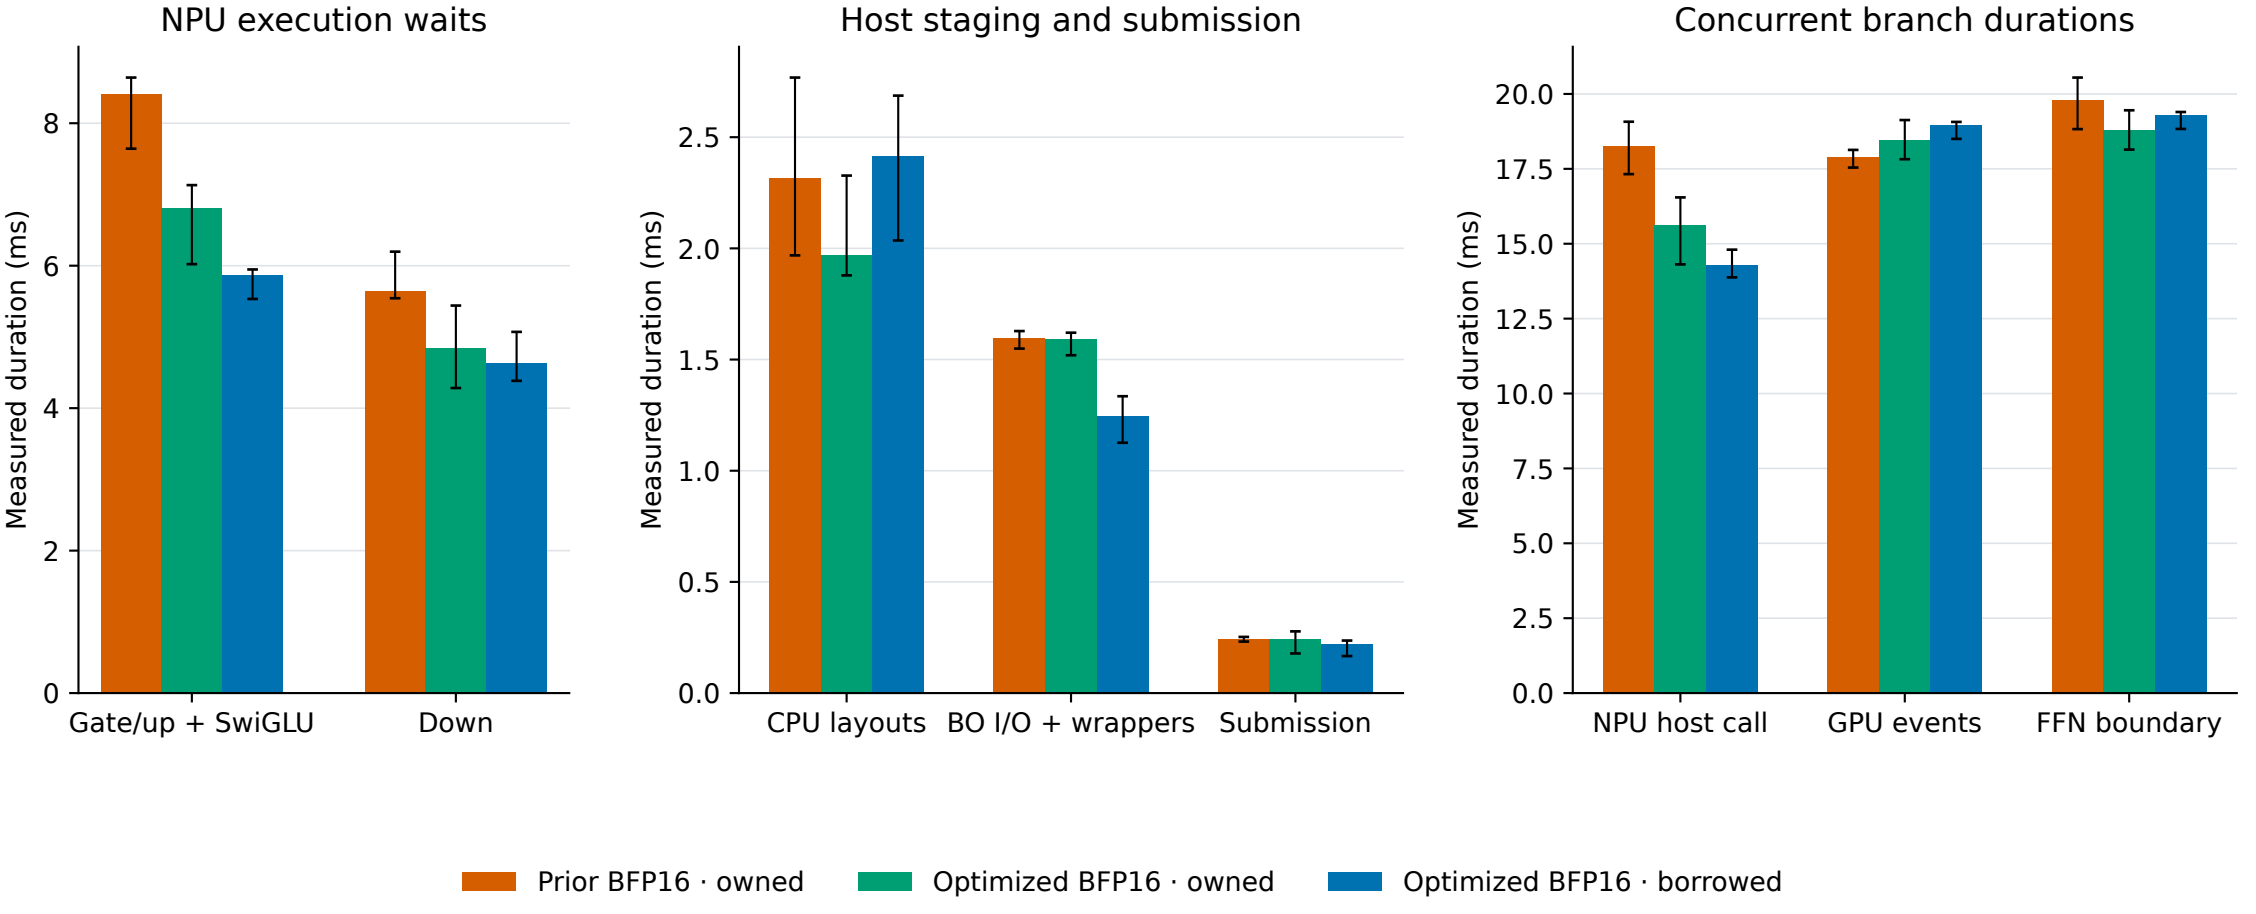
Instrumented P2048 FFN: NPU waits, host staging and branch durations

M512 / H4096 / I14336 · three independent diagnostic runs · 15 samples each



Bars: sample medians; whiskers: p10–p90. Staging totals are summed per invocation before aggregation.
NPU host waits include compute, DMA and stalls. GPU event and host spans have different clocks and overlap. These are diagnostics, not ordinary latency or full-model speedup.
