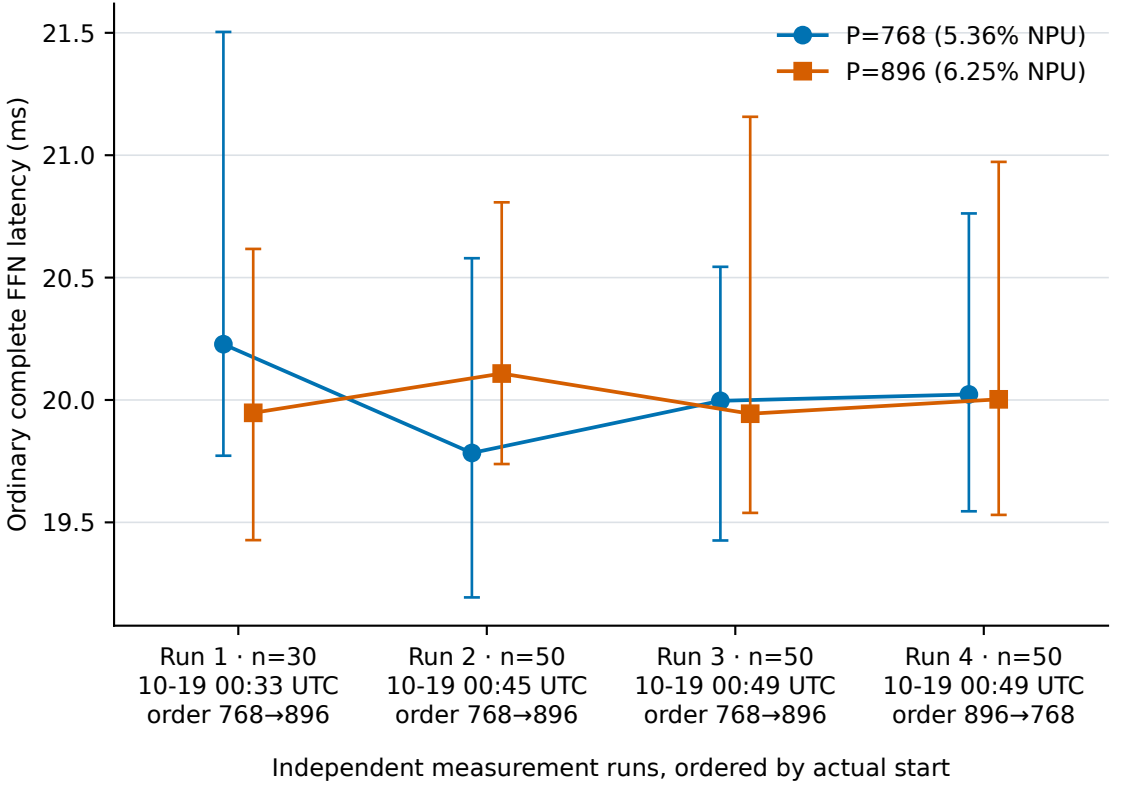
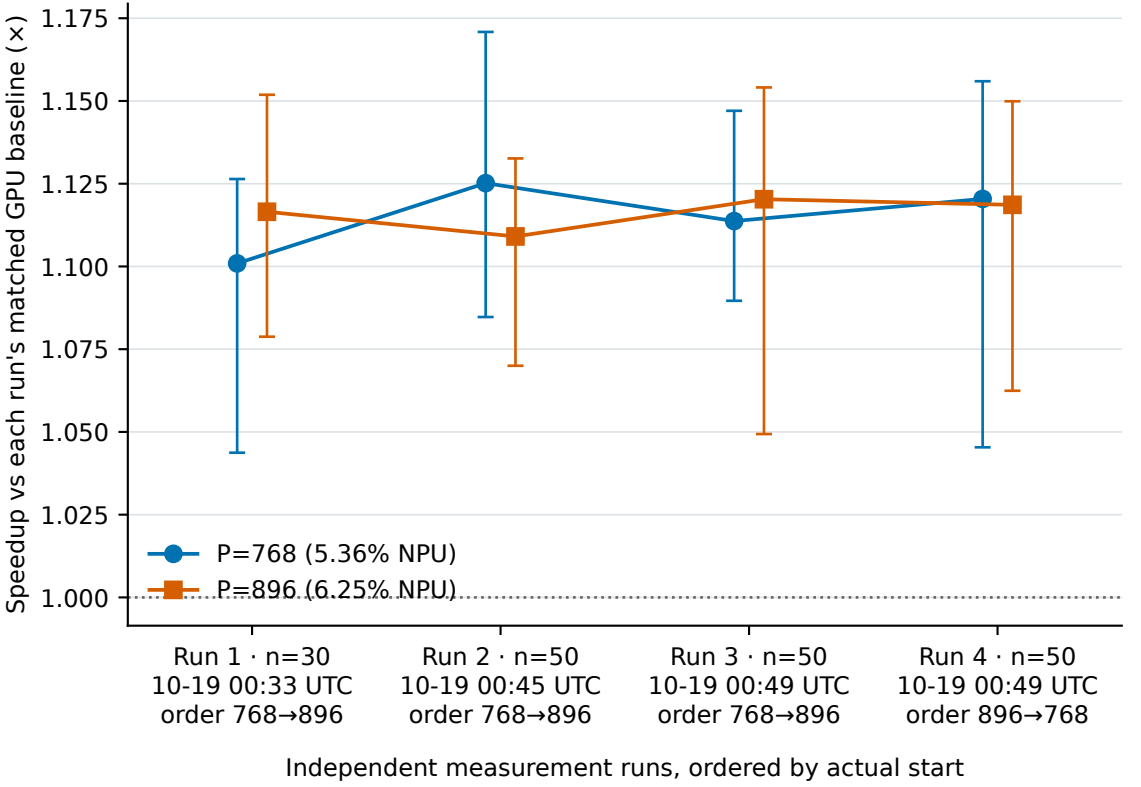
Repeated fused-partition comparison · M=512, H=4096, I=14336

GPU: AMD Radeon 890M | NPU power snapshots: default

Candidate medians and sample variability



Each point retains its own GPU-only control



Bars: sample p10–p90, not confidence intervals. Each run remains independent; no pooled winner or global optimum is inferred.
Speedup points use matched median ratios; ranges use paired sample ratios. Only runs containing every requested candidate are shown.
