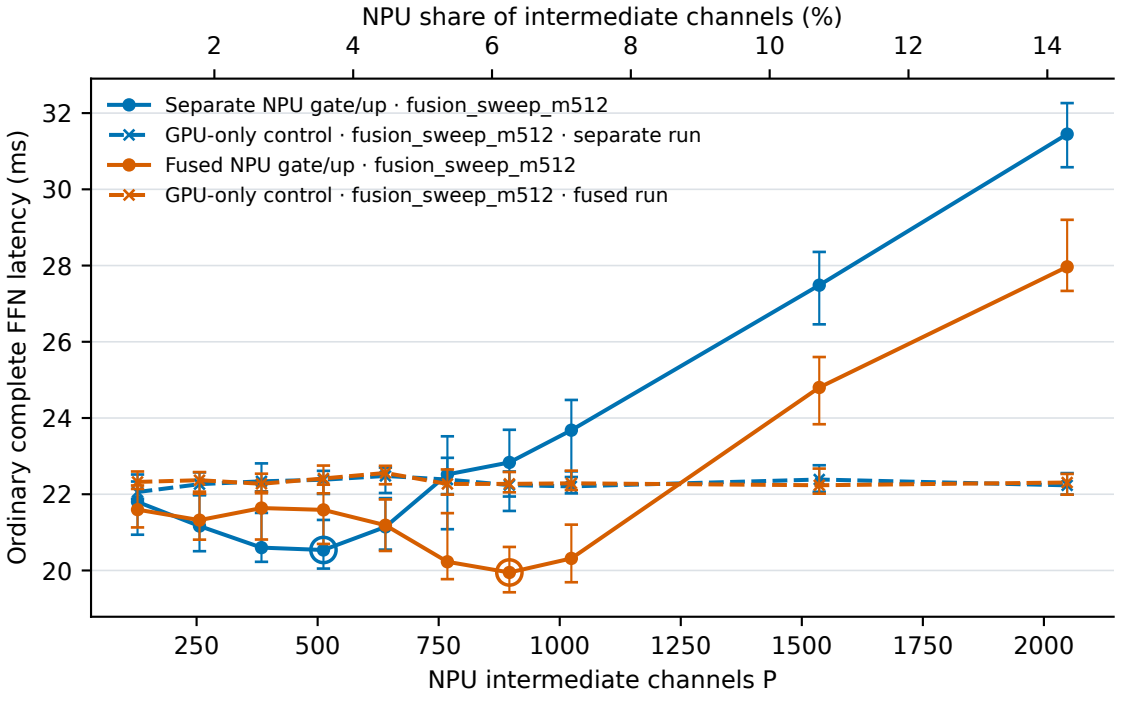
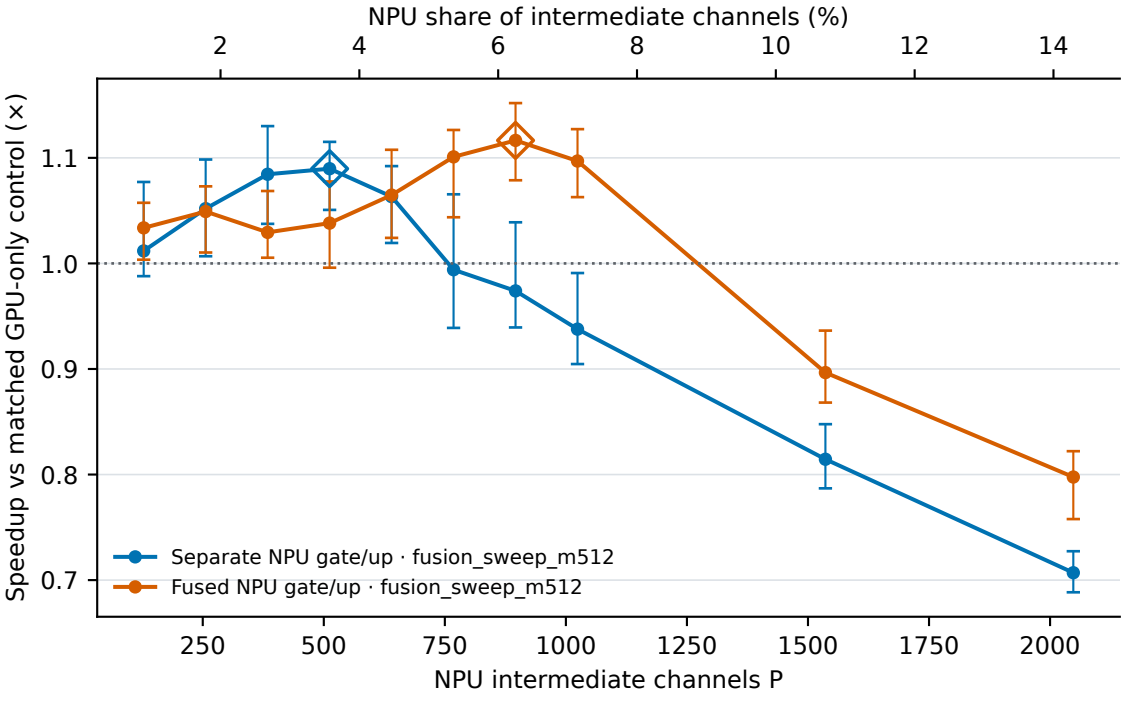
FFN partition sweep · M=512, H=4096, I=14336 · P≤2048 detail

GPU: AMD Radeon 890M | NPU power snapshots: default

Ready GPU input → synchronized GPU output



Paired control at each sampled partition



Bars: sample p10–p90, not confidence intervals. Open circle: sampled latency minimum; diamond: sampled speedup maximum.
These choices may differ under baseline drift; neither is a global optimum. Speedup ranges use paired sample ratios; repeats are not pooled.
